MASTER CLASS DELIVERABLE • VIDEO #13

Cursor AI Killer: Autonomous Coding with Cline & DeepSeek

Full-Context Autonomous Agent in Standard VS Code for $0.05 / Day

EXTENSION: CLINE / ROO CODE MODEL: DEEPSEEK-V3 ($0.14/M TOKENS) PUBLISHED BY: @PARKER.RENDER

1. Why Switch from Cursor AI to Cline?

Cursor charges $20/month flat fee, restricts fast requests during peak hours, and operates inside a proprietary fork of VS Code. **Cline** runs in standard VS Code, gives the agent autonomous bash terminal access, file read/write permissions, and lets you use DeepSeek-V3 or local models at 95% lower cost.

2. 3-Minute Configuration in VS Code

VS Code Extensions marketplace me search karo `Cline` ya `Roo Code` aur Install karo.

Settings (gear icon) me Provider select karo: **DeepSeek** ya **OpenRouter**.

Enter API Key: `sk-...` (DeepSeek provides free trial credits; usage is ~$0.05/day).

Model: Select `deepseek-chat` (DeepSeek V3) or `deepseek-reasoner` (R1).

3. Production `.clinerules` Template for Zero Hallucinations

```
# .clinerules
- Never edit production files without running tests first.
- Always inspect package.json / requirements.txt before importing libraries.
- Prefer modular functional architecture over monolithic classes.
- Run typecheck (tsc / mypy) after applying code edits.
- Keep terminal commands non-interactive; always append -y or non-blocking flags.
```

4. Autonomous Capabilities

- **Terminal Execution:** Cline can run tests, start local dev servers, and self-heal syntax errors.
- **Model Context Protocol (MCP):** Connect external DBs, GitHub PRs, and browser inspection natively.
- **Pay-as-you-go:** Only pay for what you use — 1,000,000 tokens of input costs just ₹12!
