MASTER CLASS DELIVERABLE • VIDEO #6

Stop Paying $22/Month for ElevenLabs: Free Local F5-TTS Voice Cloning

5-Second Zero-Shot Voice Cloning, Local PyTorch CUDA Acceleration & Hindi/English Synthesis

FRAMEWORK: F5-TTS (FLOW MATCHING) HARDWARE: NVIDIA GPU (>= 6GB VRAM) PUBLISHED BY: @PARKER.RENDER

1. Why F5-TTS Replaces Paid Cloud TTS in 2026

Cloud voice providers charge steep monthly fees ($22–$99/month), enforce monthly character limits, and log your proprietary voice audio. **F5-TTS** uses Non-Autoregressive Flow Matching with a diffusion transformer backbone to clone any voice in under 5 seconds with zero cloud dependencies.

2. 1-Click Environment Setup (Python & CUDA)

```
# 1. Create dedicated Conda environment
conda create -n f5tts python=3.10 -y
conda activate f5tts

# 2. Install PyTorch with CUDA 12.1+ support
pip install torch torchvision torchaudio --index-url https://download.pytorch.org/whl/cu121

# 3. Install F5-TTS and gradio interface
pip install f5-tts gradio soundfile
```

3. Complete Python Voice Cloning Script

```
from f5_tts.api import F5TTS
import soundfile as sf

# Initialize model (Cached locally on GPU)
model = F5TTS(model_type="F5-TTS", device="cuda")

# Reference voice sample (5-10s clean audio)
ref_audio = "voice_sample.wav"
ref_text = "Namaskar dosto, aaj hum seekhenge AI automation ke naye tareeqe."

# Target text to synthesize
target_text = "F5-TTS se ab aap bina kisi monthly subscription ke studio-quality Hindi audio ger

# Generate high-fidelity cloned speech
wav, sr, _ = model.infer(
    ref_file=ref_audio,
    ref_text=ref_text,
    gen_text=target_text,
    remove_silence=True
)
```

```
sf.write("output_cloned_voice.wav", wav, sr)
print("✅ Voice generated successfully: output_cloned_voice.wav")
```

4. Production Tips for Ultra-Realistic Speech

1. **Reference Audio Quality:** Use a 6–8 second WAV file recorded at 44.1kHz without background noise or room reverb.
2. **Accurate Reference Text:** Ensure the reference transcript matches the audio verbatim including natural breathing pauses.
3. **Audio Post-Processing:** Apply a subtle high-pass filter at 80Hz and gentle limiter to eliminate low-end boominess.
